FK1953: AgPd CONDUCTOR PASTE FOR AlN

The fired films of FK1953, a conductor paste with an AgPd ratio of a 3:1, provide excellent leaching resistance and solderability. The paste is the RoHS II and REACH compliant successor of FK1220 and is a suitable conductor paste for the FK9600 and FK9900M resistor paste systems.

PROCESS CONDITIONS

Substrate
The paste is designed for use on AlN substrates (with lapped surfaces) from CoorsTek/ANCeram. Substrates with other surface qualities or from other manufacturers may lead to variations in the results.

Screen printing
Use a stainless steel screen with 200 mesh and a wire diameter of 40 μm, as well as 25 μm emulsion thickness (10 to 12 μm EOM) to achieve the stated film thickness.

Leveling
The printed films should be leveled for 10±2 minutes at room temperature (22 to 25 °C).

Drying
The printed films should be dried for 15 minutes at 150 °C in a drying oven with an exhaust air system or in a continuous flow dryer.

Firing
The printed films should be fired under air atmosphere in a conveyor belt furnace at a peak temperature of 850 °C and with a dwell time of 10 minutes. Fraunhofer IKTS recommends a total cycle time of 60 minutes.

Storage
The pastes can be stored at any temperature between 4 and 10 °C. The lower the temperature, the better long-term stability. The can must remain tightly sealed during storage. In order to prevent air humidity from condensing on the paste, the can may be opened only after the content has reached room temperature. The paste needs to be sufficiently homogenized before use, e.g. with a spatula.

Safety notice
For safe handling of the pastes, please observe the notices in the safety data sheet accompanying each delivery.
Quality requirements
An analysis certificate comes included with each delivery. The paste meets current legal requirements according to RoHS II (Directive 2011/65/EC) and REACH (Regulation (EC) No 1907/2006).

Instead of an expiration date, it states a date for retesting, which is six months after the date of delivery. During this period, IKTS warrants the values stated in the analysis certificate for unopened pastes. After the date for retesting has passed, it is the client’s responsibility to test the paste quality under the conditions stated in the data sheet.
